

March 31, 2010

Green Valley Agricultural, Inc. has helped Walnutdale Farms maintain and review the Comprehensive Nutrient Management Plan (CNMP) for their facility located in Wayland, MI. This annual report has been produced with the cooperation of Kevin Lettinga, the owner of Walnutdale Farms. This report is done in accordance with the outlines set forth in the NPDES permit.

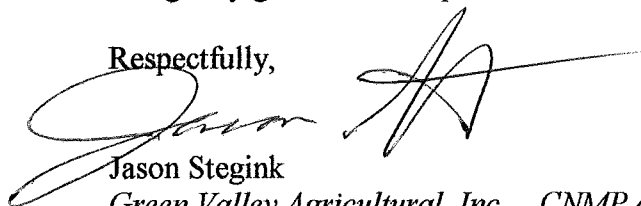

The following updates have been made to the CNMP:

- The crop plan for 2010 has been updated
- New fields that have come under Walnutdale's management have been evaluated and added to the CNMP (maps have been included in the DNRE report with current soil tests). The Division and Kuperus fields listed in the soil sample summary will not receive manure applications and have not been evaluated. Prior to manure application occurring on these fields, evaluations will be performed and submitted to the DNRE as required.
- Soil and manure tests have been updated and reflected in the manure and crop plan
- Cow numbers have been updated to reflect current operations
- New manure samples will be taken for the 2010 season
- A new manure spreading plan has been developed for 2010 and included in this report

The following booklet contains manure application records for 2009 and the documents required for the annual report.

Please direct any questions on this report or CNMP to Kevin Lettinga or myself and we will gladly go over those questions.

Respectfully,

Jason Stegink
